

Section 2 - JavaScript VS DOM - Quiz

Question 1:

What are the different environments that JavaScript can be used in?

-

1. Browser

2. Backend

3. Database

-

JavaScript is a scripting language, used only as a frontend language to manipulate and access the DOM (i.e. to make web pages dynamic and interactive).

Answer: A

Question 2:

How does the DOM API fit in with JavaScript?

-

They are both the same. The DOM API was made to execute JavaScript.

-

The DOM API and JavaScript have nothing to do with each other. JavaScript is a programming language, and the DOM API is an interface.

-

Both the DOM and JavaScript are found within your Browser. JavaScript is executed by a JavaScript engine (such as the V8 Engine for example), and the DOM API gives JavaScript access to the DOM.

Answer: C
