

Section 11 Quiz

Question 1:

Why is it important for us to know the difference between a JavaScript Object vs a **DOM Object**?

- Because we can then brag about our superior knowledge to our colleagues
- Because we'll start to understand our code better
- Because it will help us choose a better IDE to write our code.

Answer: B

Question 2:

What is a **native** object?

- It is an object that is natural or made available by your browser automatically?
- It is an object that we create using the `create.Object()` function
- It is inherent to JavaScript, which means that a native object is always available to you as long as you 're using a browser that supports JavaScript (which today, is pretty much ALL browsers).

Answer: C
